PDFs . . . Read this first !

. . . sad to say But Adobe(Acrobat) after decades whilst a pioneering breakthru' at the time !
IS still fundamentally flawed !

OK for simple small documents 1 to -maybe ~20pages !
 it is VERY SLOW for "bundled pages catalogs > 20pages
and ONLY incrementaly upgraded re Highlight SEARCH Results
the problem is in design > it is **NOT Page-served** *and the whole file needs to download first in the background !*
before it actually Opens !
> mobile phones you may be charge the excessive "file charges"
some "browsers? regard large file DLs as "spam"
some Co & Uni's WebAdmin still regard PDFs with suspicion & they may get blocked to conserve internal
"bandwidth" etc or just to keep their students/staff "dumbed-down !
 . . . so **Be-a-Ware !**

the "answer" is Flip-PAGES Technology ! evolved now over the last decade
the latest reincarnation is FlipHTML5 > brilliant !
ALL Our main PDFs have been reformatted into

FlipHTML5   . . . but based on ALL original PDF pages & its' features !

- **FAST !**
- **Page-served** (downloads ONLY one-P at a time & actually clicked on !)
- **a far better presentation format**
- **later version Now display** highlighted **SEARCH Results**
- **Thumbnail Pages**
- - - **Allows "libraries" of File Collections (** flip.chromalytic.net.au **)**
- **& from our original Website >**

https://www.chromtech.net.au/fliphtml5_bookcases-m4.htm

- **Index (SEARCH OCR'd pages) - but fundamentally still limited by Acrobats "Image Only" scanned format)**
- **current Low cost PDF "editors" NOW work-around THAT limitation !**
(the original Acrobat Editor was but a "rip-off" ! > a dis-incentive > & OUR opinion ! ONLY !)
even MicroSoft (& others) now "universally" allows "Print to PDF" & OCR'd !
- **virtually unlimited "FileSize"**
>> **800page Catalogs but IF File < 150mB (re 2022 !)**
- **only (very) slightly compromised text** (but can still be "zoomed" If/as needed)
Chromtech introduce variations of this "Flip from 2005+after ~15years of PDF limitations
Many older PDFs had to be divided into smaller single PDF pages (& still in this DIR for those PDF "diehards")
But large PDFs (& > 20-p) ARE QUITE POINTLESS !
Since **FlipHTML5**
we have discontinued doing this and now "bundle" complete OEM Catalogs (PDF > FlipHTML5) as is !

this PDF **DIR** (the "FileSize" displayed is a warning ! . . . **Be-a-Ware !**)
> 1000s of the used by us PDFs (even these are ONLY a "partial" listing from our respective OEMs
\ & some are obviously "(out-) dated' ! > redundant forALIbut the "naive" !
