PP Polypropylene - USP Class VI material - resistant to solvents and many chemicals - use at temperatures < 150 °F and pressures < 122 psi @ 70 °F

NK Natural Kynar - USP Class VI, food grade material - chemical resistant, autoclavable - use at temperatures < 226 °F and pressures < 260 psi @ 70 °F

HDPE Natural High Density Polyethylene - Low temperature, low pressure, food grade material - pure white color. HDPE is a softer material than nylon or Kynar®.

BN Black Nylon - Utility material with good strength and impact resistance - use at temperatures < 275 °F and pressures < 150 psi @ 70 °F

Automotive Marine and Biofuels Kits

EJK148 Large Biofuels Kit

EJK147 Small Biofuels Kit

Biofuels Kits

Biofuels kits contain fittings made from Kynar®, which is resistant to the organic acids present in most biofuels. The fittings are compatible with E-85 ethanol and other flex-fuels, as well as, biodiesel and algae produced fuels. They are molded from a highly durable PVDF material (Polyvinylidene Fluoride) that has a working temperature range of -80 °F to +226 ° F.

Kit configurations and fittings sizes are the same as those shown in the fuel line and cooling system kit illustrations below.
