**NEW!**  
**True Blue Performance**

Exceptionally Inert, Sky™ Inlet liners with **state-of-the-art deactivation** improve trace level analysis.

- Increase accuracy and precision
- Lower detection limits
- Use wool with confidence

Improve the analytical performance of your GC with the ultimate surface treatment for precise, part-per-trillion level sampling.

An inert GC liner is critical for low level detection of sensitive compounds, efficient analysis, and reliable results. New in 2014, SilcoTek® will re-deactivate any liner from any manufacturer – all shapes and sizes – with the industry's most popular inert coating, SilcoNert® 2000, also known as Siltek®.

Achieve the lowest levels of detection for:

- Chlorinated pesticides (EPA 8081)
- Semi-volatile Organics (EPA 8270)
- OP pesticides
- Ammonia NOx and SOx
- Sulfurs
- More
