Features of our Peristaltic Pumps

- Tube life made much longer than conventional peristaltic pumps through the employment of a single eccentric ring movement.

- These pumps can prevent damage to organic matters, and the living body can be minimized through its gentle and mild movement mechanism.
- It is hygienically safer since fluid does not come into contact with any substance other than the inside surface of the tube.
- The simple mechanism of the pump makes it possible to design even smaller size pumps than ever.
