The Mad, Mad, Mad World of Climatism: Mankind and Climate Change Mania

\$19.95

The first book on climate change that is fun to read! Using figures, cartoons, and whimsical sidebars, Steve Goreham describes our crazy world, which is far down the primrose path of global warming fantasy. Contrary to popular consensus, *climate change is natural and not caused by our cars*. But this book is not short on science. Goreham uses charts, graphs, and references to dozens of scientific papers to support his arguments. He shows that icecap melting, stronger storms, polar bear extinction, and many other climate fears are unfounded. At the same time, his large collection of zany pictures and quotes grabs the reader's interest.

Description

Description

The Mad, Mad, Mad World of Climatism: Mankind and Climate Change Mania

Over 100,000 Copies in Print!

Is it true that:

- *By changing our light bulbs, we can save polar bears?*
- *By driving electric cars, we can stop the seas from rising?*
- *By building wind turbine towers, we can make the hurricanes less severe?*

It's all part of our *Mad, Mad, Mad World of Climatism*. But the good news is that, contrary to what our newspaper, our professor, or our political leader tells us, global warming is natural and cars are innocent.

The first book on climate change that is fun to read! Using figures, cartoons, and whimsical sidebars, Steve Goreham describes our crazy world, which is far down the primrose path of global warming fantasy. Contrary to popular consensus, *climate change is natural and not caused by our cars*. But this book is not short on science. Goreham uses charts, graphs, and references to dozens of scientific papers to support his arguments. He shows that icecap melting, stronger storms, polar bear extinction, and many other climate fears are unfounded. At the same time, his large collection of zany pictures and quotes grabs the reader's interest.

Foreword by Harrison Schmidt, Senator and Apollo Astronaut

"Mad, bad, and dangerous to read!" — Timothy Renshaw, Business in Vancouver

"Goreham, the antidote for Gore!" — Doug Giles, Syndicated Radio Host

"An amusing and colorful, yet science-based, look at mankind's obsession with global warming." — Publishers Weekly

Color softcover, 300 pages, 113 figures, 150 sidebars, 13 cartoons, notes, index, and bibliography—\$22.95 retail.

E-Book available from Amazon, Apple, and Barnes & Noble.
