Value Plastics Makes Animal-Free Polypropylene a Standard USP Class VI Offering

Released by [Nordson MEDICAL](#) 05.27.11

Due to increased customer demand and a change in supplier certifications, Value Plastics, manufacturer of plastic tube fittings, has chosen to include a certified USP Class VI polypropylene as one of their core resin offerings. Any part that is currently offered in the company's standard polypropylene (parts ending in '-6') will now also be offered in the Flinthills P5M6K-080 resin (-6005) that provides the USP Class VI and animal-free certification desired by medical and biopharm companies. This change has resulted in a significant increase in Value Plastics' total product offering.

The significant line expansion is partly in response to the recent reluctance of their current polypropylene supplier to certify their resin with the USP Class VI designation. Rather than Value Plastics asking their customers to go through extensive measures and submit paperwork for this certification, the company has chosen to provide them with a quick and painless solution – switching resins.

Another major contributor to this change is the medical and biopharmaceutical industries' growing demand for animal-free resins due to the presence of BSE (bovine spongiform encephalopathy or mad cow disease). In response to many companies considering animal-free polypropylene as their best alternative, Value Plastics has decided to offer their customers a choice in polypropylene resins.

Chuck Philipp, VP of Business Development at Value Plastics, comments, "Our desire is to provide our customers with multiple options so that each customer gets a product from Value

Plastics that fulfill their needs. Offering an additional resin option seemed to be the appropriate response to the given situation.”

Value Plastics, Inc. makes and markets an innovative line of fluid management components designed specifically for flexible tubing. Products designed and manufactured include quick connect fittings, luer fittings, check valves, tube-to-tube fittings, threaded fittings and blood pressure monitoring components. Value Plastics products find global application in demanding healthcare OEM, research and specialty industrial applications.
